Verizon Wireless Mobile Office User Guides For Windows™ CE

Setting up Windows CE for a Quick 2 Netsm Connection

Before you start: Many handheld or palm devices using Windows CE do not have a 9-pin serial port. If your Windows CE device does not have a 9-pin serial port, you can use your synchronization cable or cradle as a serial port by purchasing a DB9-M to DB9-M null modem. This part may also be found at a local electronics outlet. The Mobile Office kit includes this adapter.

Step 1: Connect your sync cable, null modem adapter and serial cable.

Step 2: Tap on Start, Programs, Communications, then Remote Networking. Now double-tap "Make New Connection."

Step 3: Type "Verizon" for the name, Choose "Dial-Up Connection" then tap Next.

Step 4: Select the "Hayes Compatible on Com1:" modem then tap Configure.

Step 5: Check the box labeled "Use terminal window before dialing"

| Device Properties | | ок 🗙 |
|--|---------------------------|-------------|
| Port Settings Call Options | | |
| ■ Manual Dial (user supplies dial strings) | Connection I Baud Rate | Preferences |
| -Terminals | <u>D</u> ata Bits | 8 🔽 |
| Use terminal window | Parity | None 💌 |
| before dialing | Stop Bits | 1 💌 |
| dialing | Elow Control | Hardware 🔻 |

Step 6: If you are using the Qualcomm QCP-860 tap the Call Options tab and in the Extra Settings area, enter "&C2" (without quotes) then click "OK." (For all other phones skip this step)

| Device Properties OK 🗙 |
|---|
| Port Settings Call Options |
| Call Setup ✓ Cancel the call if not connected within 120 seconds Wait for dial tone before dialing Wait for credit card tone 0 seconds |
| Extra Settings (special modern commands may be inserted into the dial string) |
| &C2 |

Step 7: Enter "#777" as the Telephone Number and check the box labeled "Force Local" than tap Finish.

| Dial-Up C | onnection | | ? OK × |
