Managing Mobility
IN HIGHLY
REGULATED INDUSTRIES

BlackBerry Enterprise Service 10 (BES10 Regulated) offers security and control to financial, healthcare, government and other data-sensitive environments.

User demand for anytime, anywhere access to information is driving change in regulated industries and government agencies. This expectation for immediate answers makes it more challenging for organizations and their employees to deliver services in the manner that customers are quickly becoming accustomed to.

These heavily regulated organizations have another thing in common: the need for data security. Consider the following facts:[1]

OF SECURITY BREACHES
TARGETED USER DEVICES. **71**%

OF ATTACKS
INCORPORATED MALWARE. **40**%

OF NETWORK INTRUSIONS RESULTED
FROM EXPLOITED OR STOLEN CREDENTIALS. **76**%

OF SUCCESSFUL ATTACKS
USED SOME FORM OF HACKING. **52**%

OF BREACHES ARE CONSIDERED
OPPORTUNISTIC ATTACKS. **75**%

OF BREACHES AFFECTED
FINANCIAL ORGANIZATIONS. **37**%

Experience BlackBerry Enterprise Service 10 Regulated and BlackBerry 10 on America's Largest 4G LTE Network.

See the infrastructure and the device both achieve their full potential when they tap into the power of the Verizon 4G LTE network.

Combined with the Verizon 4G LTE network, the BlackBerry 10 smartphone and BlackBerry Enterprise Service 10 Regulated (BES10 Regulated) provide the ultimate in high-security mobility and device management.

Mobile users can experience the speed and power of Verizon in more places. Verizon 4G LTE is available in more than 500 markets, covering nearly 95% of the U.S. population.

BlackBerry 10 with the Verizon 4G LTE network incorporates secure storage, mutual authentication, 128-bit encryption and airlink ciphering to protect data transmissions. Speeds that empower near-immediate delivery of time-sensitive data, simultaneous voice and data services, seamless video conferencing and apps ensure effortless communication and collaboration.

The fast flow of information via mobile devices is prompting companies and agencies in regulated industries to:

+ **Simplify and standardize** operations by focusing on the appropriate technology, implementing it across the organization and enforcing policies for application and endpoint management.

+ **Manage security risks and protect against fraud** by complying with external regulations and internal policies to protect sensitive data, and proactively addressing vulnerabilities to critical information and assets.

+ **Secure data end to end** by installing strong access controls and safeguarding information in motion and at rest.

BES10 for BlackBerry® 10 smartphones provide IT administrators with the ultimate level of mobile device security, control and app management capabilities for their workforce, including:

+ **Communication logging.** BES10 Regulated tracks all data leaving the organization in order to meet regulatory requirements and capture data leaks, so action can be taken. The platform can log all BlackBerry Messenger (BBM) messages; call logs; pin-to-pin messages; SMS and MMS messages; and video call logs.

+ **Hardware control.** BES10 Regulated provides organizations with complete control over their BlackBerry 10 devices. Depending on the needs of the agency or organization, hardware features including USB mass-storage mode, WI-FI sharing, camera, video chat, location-based services (LBS), Near Field Communication (NFC), Bluetooth®, and HDMI can be disabled. SD card encryption can be controlled to meet the most demanding requirements.

+ **Network connectivity control.** BES10 Regulated ensures that data can be properly tracked and controlled. Organizations can enforce corporate browser usage to make sure all Internet traffic flows through their network, allowing them to audit Internet use by employees when on a mobile device. The platform can disable network protocols, restrict personal information management (PIM) accounts and provide administrative control of data roaming.

BES10 Regulated offers regulated industries security, continuity and reliability, with powerful control over mobile devices and applications that help meet the demands of a growing mobile workforce and customer base.
