

# LTE Internet (Installed) INSTALLATION INFORMATION

## Why am I getting this information?

One of your tenants or residents would like to install Verizon's LTE Internet (Installed) service. This information explains what's involved.

## What is LTE Internet (Installed)?

LTE Internet (Installed) is a wireless home broadband solution offering high-speed Internet service over the air using the Verizon Wireless 4G LTE network. A professional installer mounts an antenna on the side of the home and wires a router inside the home, enabling the service.

## What's involved in the installation?

**An antenna will be installed on the side of the home.**

- Customers living in a multidwelling unit (MDU), such as two- or three-family homes, town homes or condominiums, are responsible for getting authorization for the installation from their Property Manager or Homeowners Association (HOA) prior to installation.
- LTE Internet (Installed) can be installed if the customer lives on the first or second floor of a structure that has three floors or less.
- The antenna will never be installed above the second floor.
- LTE Internet (Installed) cannot be installed in an apartment building or commercial property.
- Location of the antenna is determined by the installer based on the strongest signal from Verizon's 4G LTE network.

**The antenna is mounted to the home with a mounting bracket and four screws.**

- The mounting bracket will never be removed by Verizon Wireless or any of its agents or partners.

**RG-6 coaxial cable with grounding wire is run to the grounding location.**

- Grounding is performed according to NEC state and local codes.

**Drip loops are formed to reduce water migration into connections.**

Coaxial cable continues into the home and is connected to a power supply that gets plugged into a wall outlet.

Another coaxial cable is run from the power supply to a router, which has its own power supply that gets plugged into a wall outlet.

## How big is the antenna?

LTE Internet (Installed) antenna

Width: 8.6" / Height: 10" / Weight: 5.5 lb

Standalone bracket kit

Weight: 2.1 lb

If customer requests removal of the antenna,<sup>1</sup> the mounting bracket (pictured here) and coaxial cable will not be removed.
