

## Wireless Sync Quick Start Guide for Samsung i700

Welcome to the Wireless Sync service from Verizon Wireless. This guide will walk you through the steps necessary to set up your Samsung i700.

### This Quick Start Guide will help you:

- Prepare your PC
- Create your Wireless Sync account
- Identify your email source
- Select your device
- Install software and sync your device
- Setting up ActiveSync for use with Wireless Sync

### Prepare your PC

1. Install ActiveSync onto your PC from the CD that came in the box with your device.

### Create your Wireless Sync account

Follow the instructions in this section to set up your Wireless Sync account.

2. Open Internet Explorer on the PC where ActiveSync is installed.
3. Go to <http://www.wirelessync.vzw.com> to access the server login page.
4. Click the **Sign Up Now!** button to create a new account or Logon with your existing account Mobile Number and Password.

5. You will be presented with the **3 Easy Steps to setup Wireless Sync**.

**QuickStart Guide**  
3 Easy Steps

**1 Setup a Wireless Sync account**  
Initialize your Wireless Sync account by choosing your account password and entering information to identify you as a Wireless Sync user.

**2 Identify your email source**  
Wireless Sync can work with your Internet Mail provider (e.g., AOL, Comcast, Earthlink), it can push emails from your corporate email system (Microsoft Exchange or Lotus Domino), or handle both Internet and corporate email.

**3 Install Wireless Sync software**  
To complete the process, you need to download and install software. To do this, you will need to have a cable connection from your PC to your phone.

[Back](#) [Setup Wireless Sync Now](#)

6. Read through the 3 Easy Steps and then click the **Setup Wireless Sync Now** link.
7. If you will use Microsoft Exchange or Lotus Domino as the source for your email, click on the link for your chosen platform to open the Quick Start Guide.

**1. Setup Account** ⇨ **2. Identify Email Source** ⇨ **3. Install Software**

**Quick Start Guides**

Select your device below to see the Wireless Sync Quick Start Guide for that device.

Note: To install Wireless Sync, you must have the ability to install software on this PC.

Treo 600 Smartphone

Kyocera 7135 Smartphone

Samsung i800 Smartphone

Samsung i700 Pocket PC

XV6600 Pocket PC

8. Click the **Next** button to proceed with the setup.

9. Create your permanent password by following the instructions on step 1a. Wireless Sync Account Setup and click **Next**.

**NOTE:** If you logged in with your Wireless Sync username and password on the Wireless Sync login page, this screen will not be presented. If you cannot remember your password, use the **Forgot Password** link.

The screenshot shows the Verizon Wireless account setup page. At the top, the Verizon Wireless logo is displayed. Below the logo, a progress bar indicates the current step: 1. Setup Account (selected), 2. Identify Email Source, and 3. Install Software. The main heading is "1a. Wireless Sync Account Setup". The text explains that a password must be set for the new account and provides instructions for users who have or have not created a password for their phone number. A "Forgot Password" link is provided. The page is divided into two sections: "1. Send temporary password" and "2. Create permanent password". The first section has a "Mobile Number" input field and a "Send" button. The second section has "Temporary Password", "New Password", and "Re-enter New Password" input fields. At the bottom, there are "CANCEL" and "NEXT" buttons.

10. Read the agreement in step 1b. Terms and Conditions and click **Agree**.

The screenshot shows the Verizon Wireless account setup page, step 1b: Terms and Conditions. At the top, the Verizon Wireless logo is displayed. Below the logo, a progress bar indicates the current step: 1. Setup Account, 2. Identify Email Source (selected), and 3. Install Software. The main heading is "1b. Terms and Conditions". The text asks the user to read the Terms and Conditions of Use and click "Agree" to accept them. A scrollable text area contains the following text: "Intellisync Corporation", "TERMS AND CONDITIONS OF USE", "IMPORTANT! PLEASE READ CAREFULLY. THIS IS A CONTRACT.", "1. Acceptance of Terms and Conditions", and a paragraph of legal text. At the bottom, there are "Printable Version" and "DISAGREE" and "AGREE" buttons.

11. Complete all required fields on step 1c. Account Information and click **Next**.

1. Setup Account ⇒ 2. Identify Email Source ⇒ 3. Install Software

## 1c. Account Information

Just provide us with the information below, and you'll be on your way!  
Note that the fields marked with red asterisks (\*) are required.

Your location

Time Zone: Eastern Time (US & Canada) (GMT-5:00)

I've verified that the above time zone is correct \*

Work Address:

City:  \*

State:  \* ZIP Code:  \*

Your name and email address

First Name:  \* Last Name:  \*

Email Address:  \*

Enter the email address to be used as the From: address on emails you send.

## Identify your email source

12. There are three options available on step 2, **Identify Your Email Source** page. Select the option that applies best to you and follow the detailed instructions below for that option.

1. Setup Account ⇒ 2. Identify Email Source ⇒ 3. Install Software

## 2. Identify Your Email Source

**Corporate email** using Microsoft Exchange or Lotus Domino. To work with these email servers, Wireless Sync will need to install software on a PC to monitor your mailbox.

**Internet email** from an Internet Service Provider such as Verizon.net, EarthLink, AOL, Comcast, etc.

**Both**

## Corporate email

- a) Select the **Corporate email** option and click **Next**
- b) There are two options available on step 2a, **Corporate Email Source Setup**.

- a. "Install the PC Monitor software on this PC now"
  - i. Choose this first option to install the PC Monitor software on the PC where you are currently logged in.
  - ii. Click **Next** to review the PC Monitor System Requirements
  - iii. Read through the page to ensure that the PC meets all system requirements.

- iv. It is recommended that you review the Quick Start Guide for your corporate email server before you proceed with the PC Monitor installation.
  - v. To continue setup, click **Next** and skip to **Page 7, Select Your Device**
- 'Install the PC Monitor software on another PC at a later time'
    - i. Choose the second option if you would like to install the PC Monitor at a later time.
    - ii. It is recommended that you review the Quick Start Guide for your corporate email server before you proceed with the PC Monitor installation.
    - iii. Skip to **Page 7, Select Your Device**

## Internet email

- Select the **Internet email** option and click **Next**.
- Select your **Service Name** from pull-down menu provided. The "Email Server Address" field will automatically be provided.
- Next enter your **Username**, **Password** and **Email Address** in the appropriate fields.

Other
Verizon.net
AOL
Comcast
Earthlink
MindSpring

**NOTE:** If your provider is not listed, select **Other** from the drop-down list. You will now need to manually enter your **Email Server Address**. At the bottom of the web page there are some tips provided to help you determine this value. If you are still unsure of your correct Email Server Address, check with your email service provider.

1. Setup Account ⇌ 2. Identify Email Source ⇌ 3. Install Software

### 2b. Internet Mail Setup

**Internet Mail Connection Settings** ( ) are required

Service Name: Other

Email Server Address: \*

Username: \*

Password: \*

Email Address: \*

Enter the email address for this account

Test Settings... ← Click here!

After filling in these required fields, press the Test Settings button. If there is a setup issue, check the Tips below. You may also wish to contact your ISP to get the configuration information used to setup a PC-based email client.

#### Tips on POP/IMAP Setup

**Yahoo!** You must subscribe to Yahoo! Mail Plus, a for-charge service. If you do, enter **pop.mail.yahoo.com** as the server name.

**Hotmail, MSN** Currently not supported

**Other providers** Common server names are **pop.serviceprovider.com**, **mail.serviceprovider.com**, **pop3.serviceprovider.com**, or similar names ending in .net rather than .com.

Server names always have at least one dot ("."), never have an @ in them, never start with http, and almost never start with www.

- (OPTIONAL) You can configure advanced settings for your email service provider using the **Advanced Setup Options** link. Most users will not require modification of these settings.
- Click **Next** after your settings have been verified using the "Test Settings..." button.

## Both

This feature provides you with the ability to have both your Corporate and Internet email sources integrated into one mailbox on the Samsung i700. Follow the setup instructions above for each option as they are presented to you during set up.

If you are not ready to configure both options now, you can set up one email source now and another email source at a later time from the Account Setup page in the Wireless Sync website.

## Select your device

13. After you have identified your email source, you will be prompted to select your device. Select the **I use a Samsung i700 Pocket PC** option and click **Next**.

## Install software and sync your device

14. Confirm that your device has the Pocket PC 2003 operating system. Instructions are provided on the web page.

- Attach the Samsung i700 to the cradle or cable attached to your PC. Ensure the device has connected to ActiveSync by confirming the ActiveSync icon in the task tray is green.

**NOTE:** Either a Standard or a Guest partnership is OK for installing the software.

- Click **Install** then carefully read and follow the prompts provided from the installer to install the software on your PC.

**NOTE:** Your install checklist may differ from what is shown here, depending on the email source you selected during the setup process

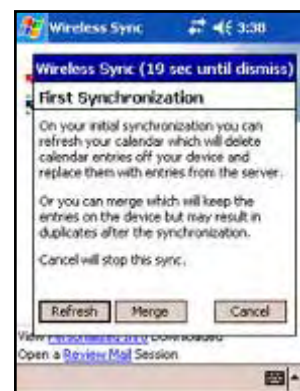

- After the software install is complete, **remove the device** from the cradle or cable.
- If not already open, **launch the Wireless Sync Client** on the Samsung i700.
- Tap (single tap) on the “Sync” button to initiate a Wireless Sync.
- Enter your Wireless Sync **password** when prompted.
- On the first sync event you will be prompted to **Refresh** or **Merge** the data in Wireless Sync with the data on the device.

If you selected **Corporate email** or **Both** when configuring your email source, it is recommended to select the **Refresh** option.

If you selected **Internet email** as your email source, it is recommended to select the **Merge** option.

- Your device is configured and synchronized with Wireless Sync. Keep the device radio powered on and you will continue to get your information pushed to you!

#### NEXT STEPS:

- If you selected the **Corporate email** option for your email source, please continue with the configuration of your PC Monitor. Refer to the *Quick Start Guide for Microsoft Exchange* or *Quick Start Guide for Lotus Domino* for more information. Once the PC Monitor is configured, you will begin to receive your email and PIM (calendar, contacts, tasks and notes) data wirelessly.
- If you selected the **Internet email** option you will begin to receive your email after the Wireless Sync server has successfully loaded your messages from the email source. This may take several minutes depending on the amount of mail on your server.

## Setting up ActiveSync for Use with Wireless Sync

Wireless Sync is a replacement for the PIM and email components of ActiveSync, which is included with your Samsung i700. More specifically, the following types of data can be synchronized with both ActiveSync and Wireless Sync: Calendar, Contacts, Tasks, Inbox, and Notes.

The individual user must insure the proper settings are configured in ActiveSync to avoid duplicating data on their device or in Outlook. The settings required in ActiveSync will depend on which Email Source was selected in Step 2 (page 4 above) of the Wireless Sync account setup. In all cases, the Inbox data should only be synchronized with Wireless Sync.

### Corporate email Users

Users synchronizing with a Corporate email source will receive updates to all PIM and email data using Wireless Sync. In this case, these data sections should not be selected in the ActiveSync configuration at the user desktop.

Follow these steps to verify your ActiveSync settings and insure proper synchronization when you cradle/cable your device to the PC.

1. Open **Microsoft ActiveSync** on the PC
2. Select the **Options** button at the top of the ActiveSync application screen.
3. Verify that the following values are unchecked. If the box is checked, please uncheck it.
  - Calendar, Contacts, Tasks, Inbox, Notes
4. Also verify that the “Enable Synchronization with a server” option is NOT selected.

### Internet email Users

Users synchronizing only with an Internet email source will receive updates to their PIM data using ActiveSync at the desktop. In this case, the PIM data sections should be selected in the ActiveSync configuration at the user desktop.

Follow these steps to verify your ActiveSync settings and insure proper synchronization when you cradle/cable your device to the PC.

1. Open **Microsoft ActiveSync** on the PC
2. Select the **Options** button at the top of the dialog box.
3. Verify that the Inbox value is unchecked. If the box is checked, please uncheck it.
4. Also verify that the “Enable Synchronization with a server” option is NOT selected and click **OK**
5. Right-click on the  icon in the task tray and select **Exit**
6. Go to Start → Control Panel → Add/Remove Programs
7. Select the “ Wireless Sync Client” and choose the **Remove** button. This software is not required for users configured for Internet email only once the device and ActiveSync have been properly configured.
